TRENDS IN TYPES OF ACCIDENT BY OCCUPATION, 1984-1988

This report shows trends in types of accidents by occupation for the period 1984-1988. It shows what the most commonly occurring accident categories are for individual occupations, and whether there has been any change in these categories over the period 1984-1988. The claim counts shown for each year are the number of wage-loss injuries that occurred in the year and were accepted by the end of the first quarter of the following year.¹ The claim counts include fatal and permanent disability claims.

Table 1 shows annual claim counts for broad occupational categories. The categories are the major groups from the OCM (1971) occupational coding system. The major groups are defined by the first two digits of the four digits in the code. The OCM coding system is used by the British Columbia Workers' Compensation Board and the other Canadian Boards as part of the National Work Injuries Statistics Program.

Table 2 shows annual claim counts for more detailed occupational categories. The categories are the minor groups from the OCM, defined by the first three digits of the code. Minor groups with small claim counts are not shown in Table 2.

Table 4 constitutes the main part of this report. It shows information for the most detailed OCM occupational categories, those that use all four digits of the code. There is one page in Table 4 for each of the four-digit occupations that had at least

¹ Claim counts in the annual report are on a different basis. The annual report shows claims accepted in the year regardless of year of injury.

100 wage-loss injuries in 1983 and for selected other four-digit occupations. The remaining four-digit occupations have been combined into groups in Table 4.

Table 3 is a table of contents for Table 4; it lists the four-digit occupations tabulated in Table 4. The information shown in Table 4 for each occupation is a breakdown of claim counts by year and accident category. The accident categories are based on the Type-of-Accident and Source-of-Injury codes that are part of the National Work Injuries Statistics Program.

As an illustration of the four-digit structure of the OCM Occupation Code, we note the sixth page in Table 4, occupation 3131. This occupation is part of minor group 313 in Table 2, and is part of major group 31 in Table 1.

The information in Tables 1 and 2 shows that the injury count remained fairly stable between 1984 and 1986 for most occupational categories but that almost all categories showed increases in 1987 and 1988. One factor contributing to the recent increases in claim counts is increased employment.
